Experience	<i>Engineering Consultant</i> , LocalSolo Freelance: Vancouver, BC, Canada (1/18 to present) Provide technical resources to help organizations reach their full potential. <i>Substitute Teacher</i> , Source4Teachers: Cherry Hill, NJ (12/13 to 2/15) Deal with special ed students with behavioral issues under the guidance of a child psychologist; present math, science, general curricula to individuals ranging from preschool through high school. <i>Research Assistant</i> , Maine Chemistry Dept: Orono, ME (8/03 to 5/06) Apply cyclic voltammetry, an electrochemical measurement, to find: catalytic activity in gold compounds for methanol oxidation, and electrochemiluminescence (ecl) in a ruthenium compound for DNA analysis. <i>Research Assistant</i> , NCSU Materials Science Dept: Raleigh, NC (5/96 to 5/99) Grow GaP heterostructure films on Si in a chemical beam epitaxy system, analyze plane polarized reflectance spectroscopy (PRS) / laser light scattering (LLS) in-situ optical signals, develop a radio frequency nitrogen plasma source for GaN film growth, and do a substrate temperature calibration based on reflectivity measurements. <i>Research Assistant</i> , NCSU Materials Science Dept: Raleigh, NC (1/87 to 5/89) Design / build a microwave plasma chemical vapor deposition chamber, achieve a unique ellipsoidal plasma advantageous for film growth over typical spherical plasmas, and grow polycrystalline diamond films on Si. <i>Research Specialist</i> , MIT Advanced Energy Materials Lab: Cambridge, MA (11/84 to 1/87) Use infrared laser to produce ceramic powders, amorphous Si films, and alumina-based crystals. Analyze transmitted / scattered optical signals from ceramic powder process, giving rise to a computer monitoring scheme. Set up interferometer to measure film thickness, providing a realtime signal, to calibrate growthrate. Develop process control loop for laser cavity tuning, leading to more reliable film properties. Collect in-situ stress measurements of growing films, through deflection of an optical laser, as sample curvature evolves. Optimize growth parameters of amorphous Si solar cells, and scale-up new chemistry of ceramic powders.
